

# AMERICAN BEAUTIES NATIVE PLANTS® for Native Bees

Native plants are essential if native bees are to survive and thrive. Native plants, including trees (T), shrubs (S) and perennials (P) have evolved with native bees and are better than non-native plants at providing the nutritional support in the form of nectar needed to sustain the native bee life cycle. Native bees are essential pollinators that, along with other pollinators, are responsible for one-third of the worlds food supply.

maple  
Acer (T)

shadblow serviceberry  
Amelanchier (T)

butterfly weed  
Asclepias (P)
