

AMERICAN BEAUTIES NATIVE PLANTS® for Native Butterflies

Native plants are essential if native butterflies are to survive and thrive.

Native plants, including trees (T), shrubs (S) and perennials (P) have evolved with native butterflies and are better than non-native plants at providing vital nutrition and protection to sustain the butterfly life cycle. In fact, without many of the plants listed, certain species of butterflies would cease to exist!

Native butterflies add beauty to the home landscape and, along with native bees and other pollinators are responsible for one third of the world's food supply.

shadblow serviceberry
Amelanchier (T)

butterfly weed
Asclepias (P)

false indigo
